RELEASE DATE: IMMEDIATELY

Terra Sonic International Builds TSi 150C Customized for the Mining Industry

Marietta, Ohio, USA. . .Terra Sonic International, the industry leader in the manufacture of Sonic Oscillators, Sonic Drill Rigs, and Sonic Drill Steel, recently finished a customized TSi 150C Crawler-Mounted Sonic Drill Rig for the mining industry.

The TSi 150C is designed with a 225 HP diesel engine to power all driving, drilling, and accessory hydraulic functions. The proprietary TSi 150 Series Sonic Oscillator uses 150 HP to generate resonant sonic energy in the drill string. The mast is 32 ft (9.7m) long and accommodates 20 ft (6m) sections of tooling.

The TSi 150C recently completed was engineered with a customer-specified rotation safety cage. Terra Sonic International can provide safety options to make Terra Sonic rigs compliant with the pertinent safety standards.

"We want our customers to remember that when they require specific functionality or options, we can accommodate them," said Vincent Trotta, President. "Whether a safety cage like on this rig, a diamond coring option, a short mast, or something else entirely, Terra Sonic's design team will translate special requirements into reality on any model we produce."
