

PRESS RELEASE

RELEASE DATE: IMMEDIATELY

Betts Environmental Purchases New Terra Sonic Drill Rig and Becomes First Commercial Sonic Driller in Georgia

Marietta, Ohio, USA...Terra Sonic International, the industry leader for the manufacture of Sonic Drill Rigs, has sold a new Sonic Drill Rig to Betts Environmental based in Adel, GA. Betts is the first commercial sonic driller based in GA and joins the US Army Corps of Engineers Savannah District with their identical TSi 150CC as the only sonic rigs in Georgia.

Betts is an exploration, environmental, and geotechnical drilling services firm with experience providing high-quality, cost-effective drilling solutions for public and private sector clients since 1993. This family business has established a reputation over the past two decades for providing quality field services on assessment and remediation projects all over the southeastern United States.

Betts has maintained an impressive list of customers for 25 years and offers drilling services from its headquarters in Adel, GA and field offices in Atlanta, GA, Jacksonville, FL, and Tallahassee, FL. They are licensed in GA, FL, AL, MS, LA, TN, SC, and NC. They recognize the market for sonic drilling will likely expand their service territory beyond these states.

"We thought about expanding into sonic drilling for quite some time," said Tony Betts, President of Betts Environmental. "We surveyed 200 of our core customers and asked them which manufacturer made the best sonic rig on the market. The overwhelming majority said Terra Sonic and our customers made our decision easy. The TSi 150CC Sonic Drill Rig is capable of providing the types of services our customers demand."

Betts' new TSi Rig is a TSi 150CC Compact Crawler-mounted Sonic Drill Rig. The TSi 150CC uses the same unique Sonic Oscillator designed for the TSi 150T and 150C with the added benefits of compactness and transportability. Measuring less than 20 feet long, the TSi 150CC fits inside a standard 20 cubic yard sea container. It weighs just 22,400 lbs. (10,160 kg). The 150CC is equipped with the proprietary TSi 150 Series Sonic Oscillator that efficiently utilizes up to 150 HP (111.85 kW) to generate powerful resonant Sonic energy in the drill string to a drilling depth of up to 1,000 feet (243.9 m), depending upon the lithology and casing design, and it can drill from vertical to nearly horizontal. The 150CC is driven via remote control with trekking speeds up to 3.5 MPH (5.6 km/hr).
